NEW APP GIVES LAST-MILE PERSONNEL A DIGITAL 'VOICE'

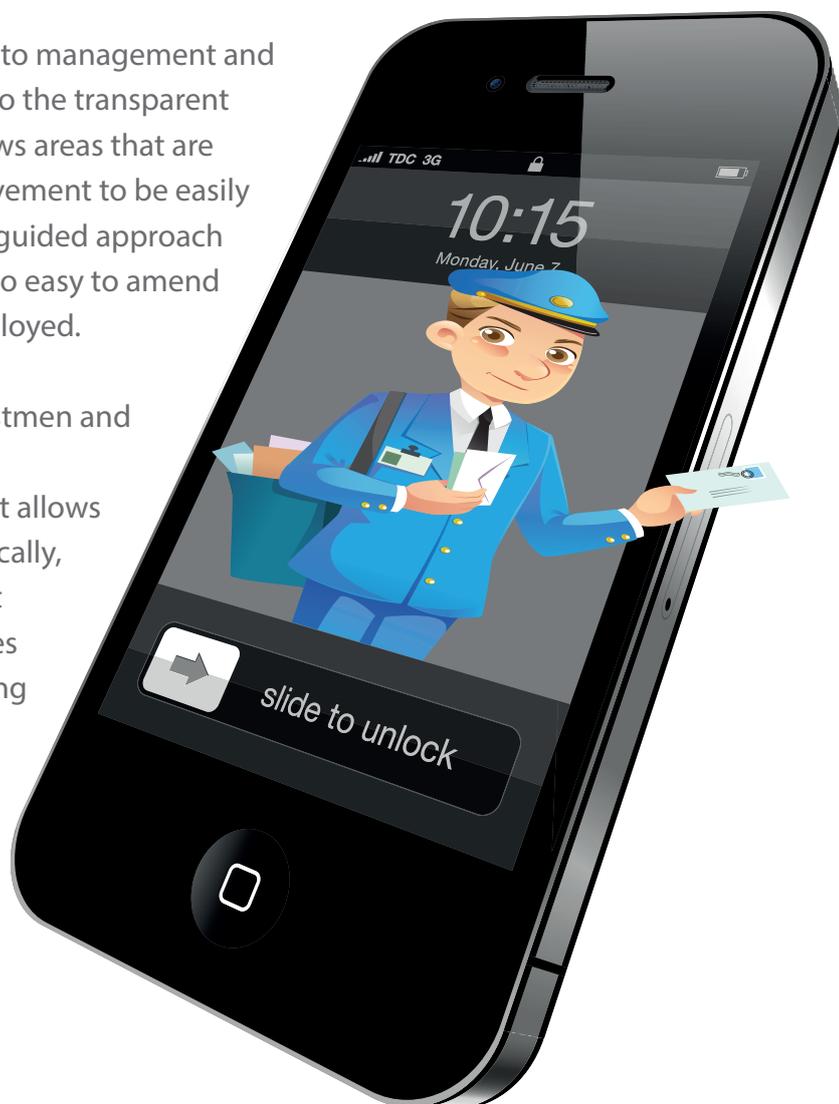

A new development from Prime Vision allows those responsible for delivering the post to feedback important information to improve overall service quality and efficiency. Called Digital Mail Man, it's an app for iOS and Android devices that provides the means for all manner of issues to be reported in the field, anytime and anywhere.

The scope of Digital Mail Man is huge. It can be used for reporting a mis-routed mail item, a mail box too small to receive the delivery or a road accident that puts the postman behind schedule. Photographs can be taken, of a damaged mail bag or mail piece for example, that are then forwarded to the relevant department.

The postman can also use Digital Mail Man to advise address anomalies to enhance the automatic sorting process. And absenteeism, a leave application and extra availability can all be reported via this versatile app.

Digital Mail Man feeds live information to management and the postman's colleagues which leads to the transparent monitoring of mail deliveries. This allows areas that are performing poorly and needing improvement to be easily identified, resulting in a managed and guided approach to any adjustments. Functionality is also easy to amend allowing new services to be swiftly deployed.

In effect, Digital Mail Man gives the postmen and women a real-time digital 'voice' which enhances the agility of the operation. It allows delivery routes to be managed dynamically, optimising manpower and costs. And it gives those involved in last-mile services the knowledge that their input is helping to make the overall process more efficient.

Prime Vision the company

Prime Vision is a pioneer in the field of recognition technologies that traces its history back to 1956 and the dawn of the computer age. Today, Prime Vision is one of the world's leading integrators and developers of core technology around pattern matching and recognition techniques that form the heart of mission and time critical automation processes all over the world.

You can find Prime Vision technology and solutions involved in processing many hundreds of millions of items every day all around you! Whether it's the mail in Morocco, postcards in Australia, newspapers in Finland, packets in the United States, cheques in the Netherlands, apparel in England, parcels in New Zealand....the list goes on.

Prime Vision technology can be applied in many scenarios and we always remain open to discuss custom requirements. Our main businesses focus on the postal and express courier, warehousing and logistics and justice and law enforcement vertical markets.
