

"Prime Vision is possibly the friendliest place to work in the Netherlands.

I was quite surprised to have a chat with the CEO in the first week. Later I realized that at Prime Vision there is almost no hierarchical structure. This is great, as it inspires free thinking and is a true incubator for innovation. Moreover, in my first weeks I had a few out-of-the-box ideas, on which I received plenty of assistance and good advice.

The company is based in Delft, close to the Technical University of Delft. One of the top technological institutions in the world. The people at Prime Vision are highly qualified and regularly surprise me with their knowledge and diligence. One thing is certain, when you are working at this fast-growing company (17% in 2016) you will be in a dynamic environment, on the forefront of technology." - Wouter Buijze

"We really work as a team and everyone supports each other." - Mellaney Knol

Peggy Ann Kusters

MAKE THE NEXT STEP IN **YOUR CAREER**

INNOVATION ■ EXPERTISE ■ TECHNOLOGY

WORKING AT PRIME VISION
WE DON'T LIKE TO BE AVERAGE

Prime Vision ranks among the top three players in the field of advanced recognition and sorting decision software (OCR software). Daily, millions of letters and parcels are processed by our customers through our software. Our customers include companies such as DHL, NPO, NEC, PostNL and various other logistics companies around the world. Our software is part of the critical core processes of the customer.

You may have seen our headquarters if passing the motor way around Delft. If you have not heard of Prime Vision, then you will certainly have heard of our major shareholder PostNL.

We are active in several markets with the primary focus for Prime Vision being the global and logistics market. We are a full service company, so following development, we have the teams that work with clients to project, manage, commission and support projects large and small. Hundreds of millions of people rely on our solutions every day.

OUR TECHNOLOGY - **WE DEVELOPED IT OURSELF!**

Already in 1957, we started with the development of our own technology as part of the PTT research department. A few years later the High Yield Character Reader (HYCR™) was invented. This unique technology is applied in several recognition solutions and has far higher processing capabilities than the average human. It can reduce processing time and interpretation errors, whilst offering significant improvements in quality and accuracy.

Our employees are challenged to continuously advance our products.

Some of our clients:

INNOVATION AT PRIME VISION

Our company is all about innovation in IT. On the development side, we have some of the best brains in the industry creating new software and solutions for recognition technology and data processing.

We develop Internet of Things solutions that will offer new opportunities for logistics operators and that can be used in other markets as well. Further developments center on mobile robots and drones.

Moreover we work with the latest machine learning and artificial intelligence techniques in Computer Vision and Robotics.

WE LOVE TO THINK OUT OF THE BOX

OUR CULTURE – **IT'S NOT JUST ABOUT WORK**

It's really the people that make Prime Vision a great company to work for. We hire people who are smart and determined, and we favor passion over experience. Although Prime Vision's employees share common goals and visions for the company, we are a multicultural and intellectual melting pot of ambitious people with different backgrounds.

For us it's about having fun at work and enjoying the things we do.

We strive to maintain the open culture often associated with startups, in which everyone is a hands-on contributor and feels comfortable sharing ideas and opinions. We offer the opportunity to have flexible working hours and respect a healthy work-life balance.

WE ARE AN INFORMAL COMPANY WITHOUT A LOT OF HIERARCHY.
